Crypto is well-suited for agentic payments

Payment rail	Typical fee	Fee on $0.10	Buyer disputes?
Credit cards	2.9% + $0.30	$0.303	Yes
PayPal	3.49% + $0.49	$0.493	Yes
PayPal Micropayments	4.99% + $0.09	$0.095	Yes
ACH / bank debit	**0.8%**, capped	$0.001	Yes / returns
Stripe MPP (stablecoin path)	**~1.5%**	$0.002	No chargebacks
Coinbase x402	**$0.001 / transaction**	$0.001	No chargebacks

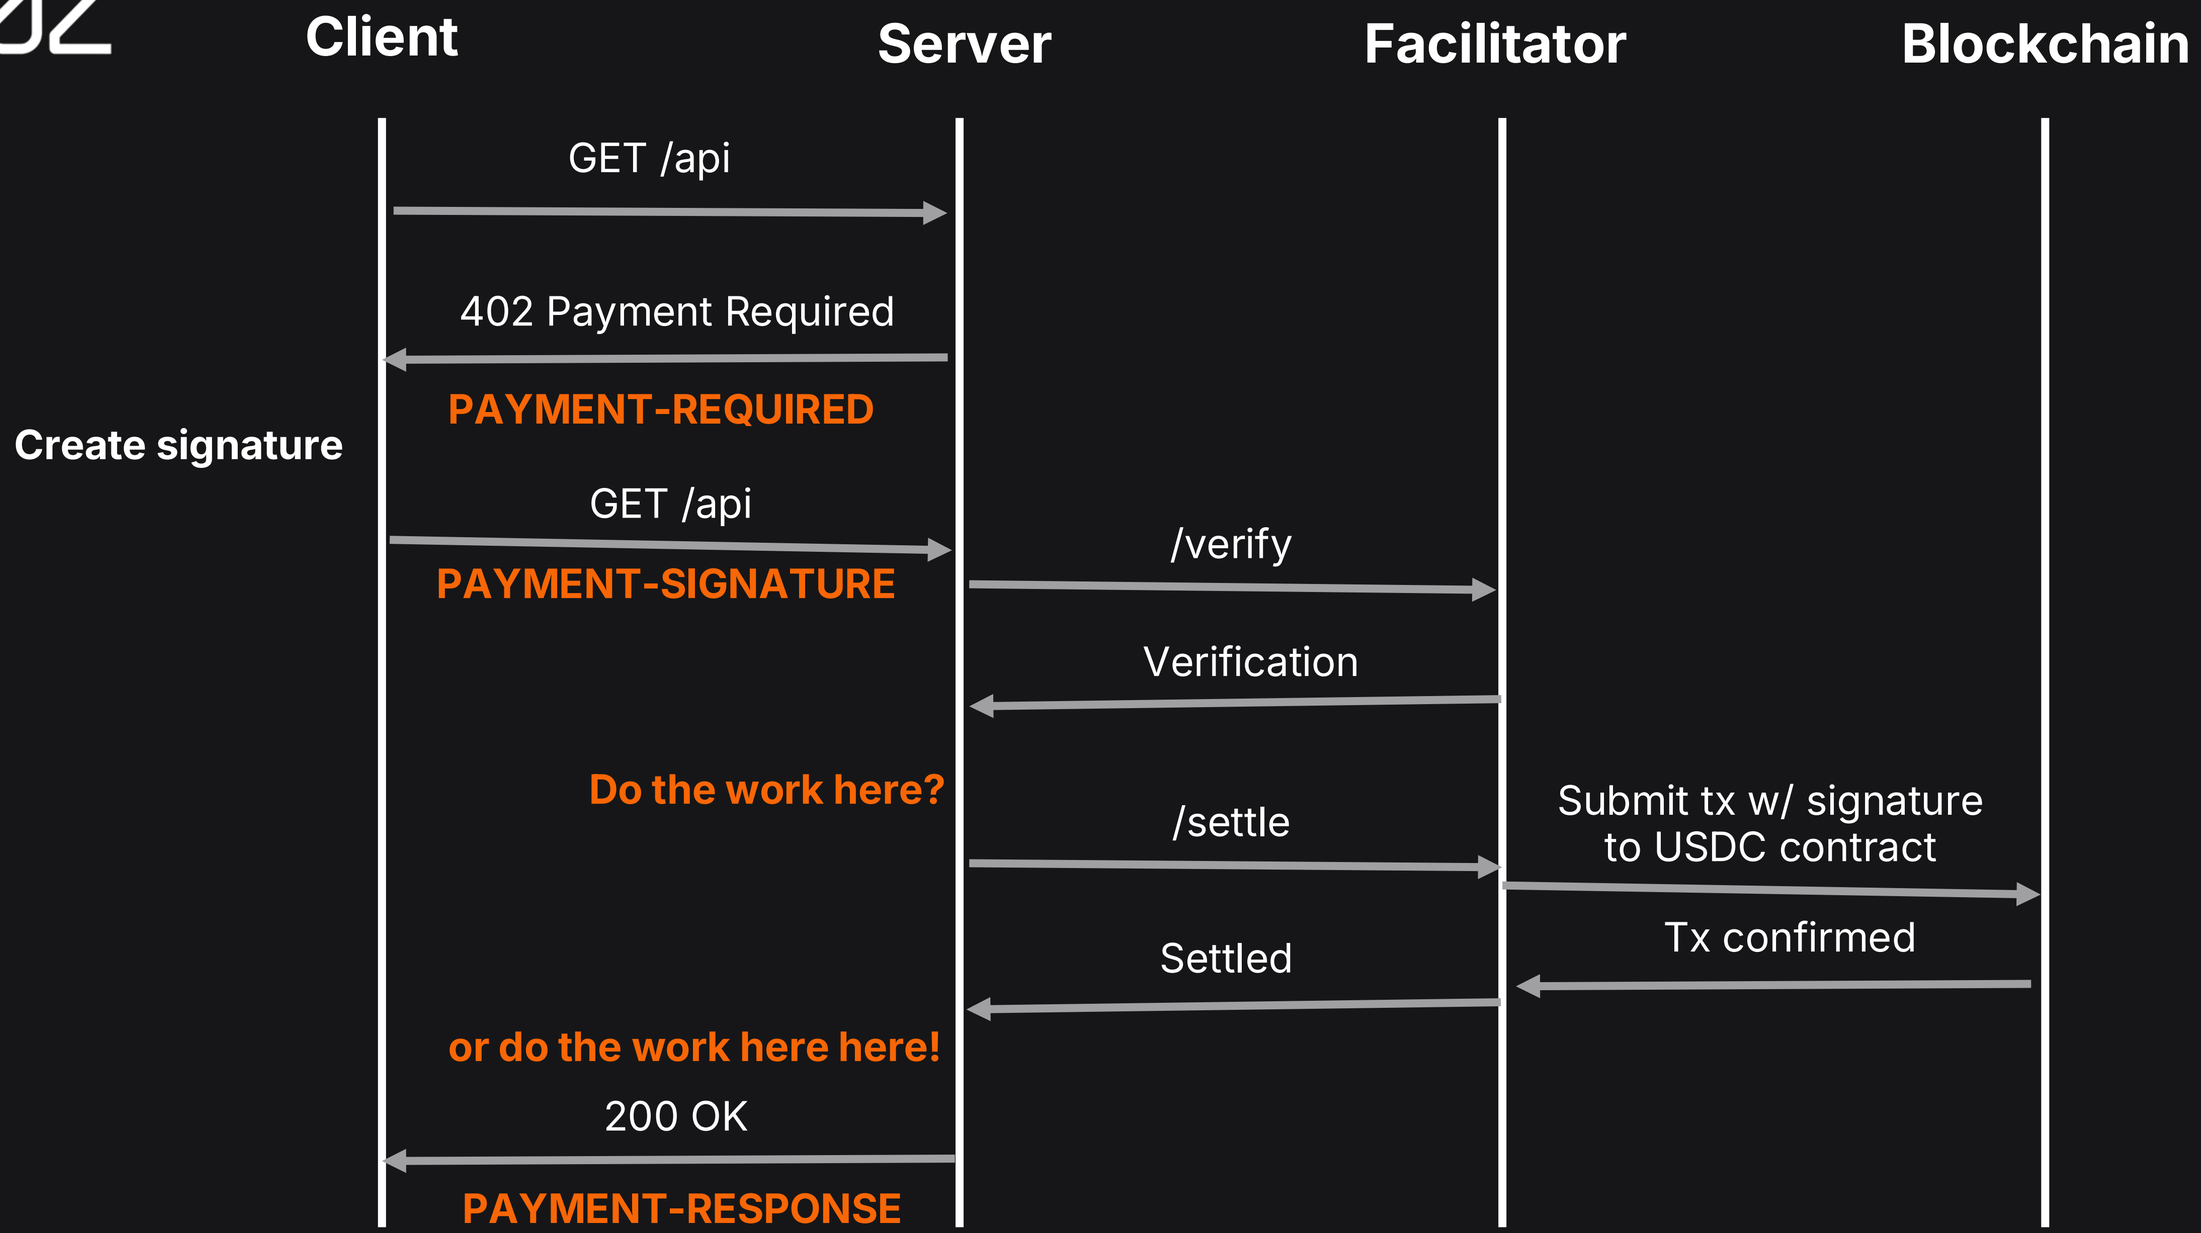

How x402 works

HTTP 402 code introduced in 1997
RFC 2068 (HTTP/1.1)

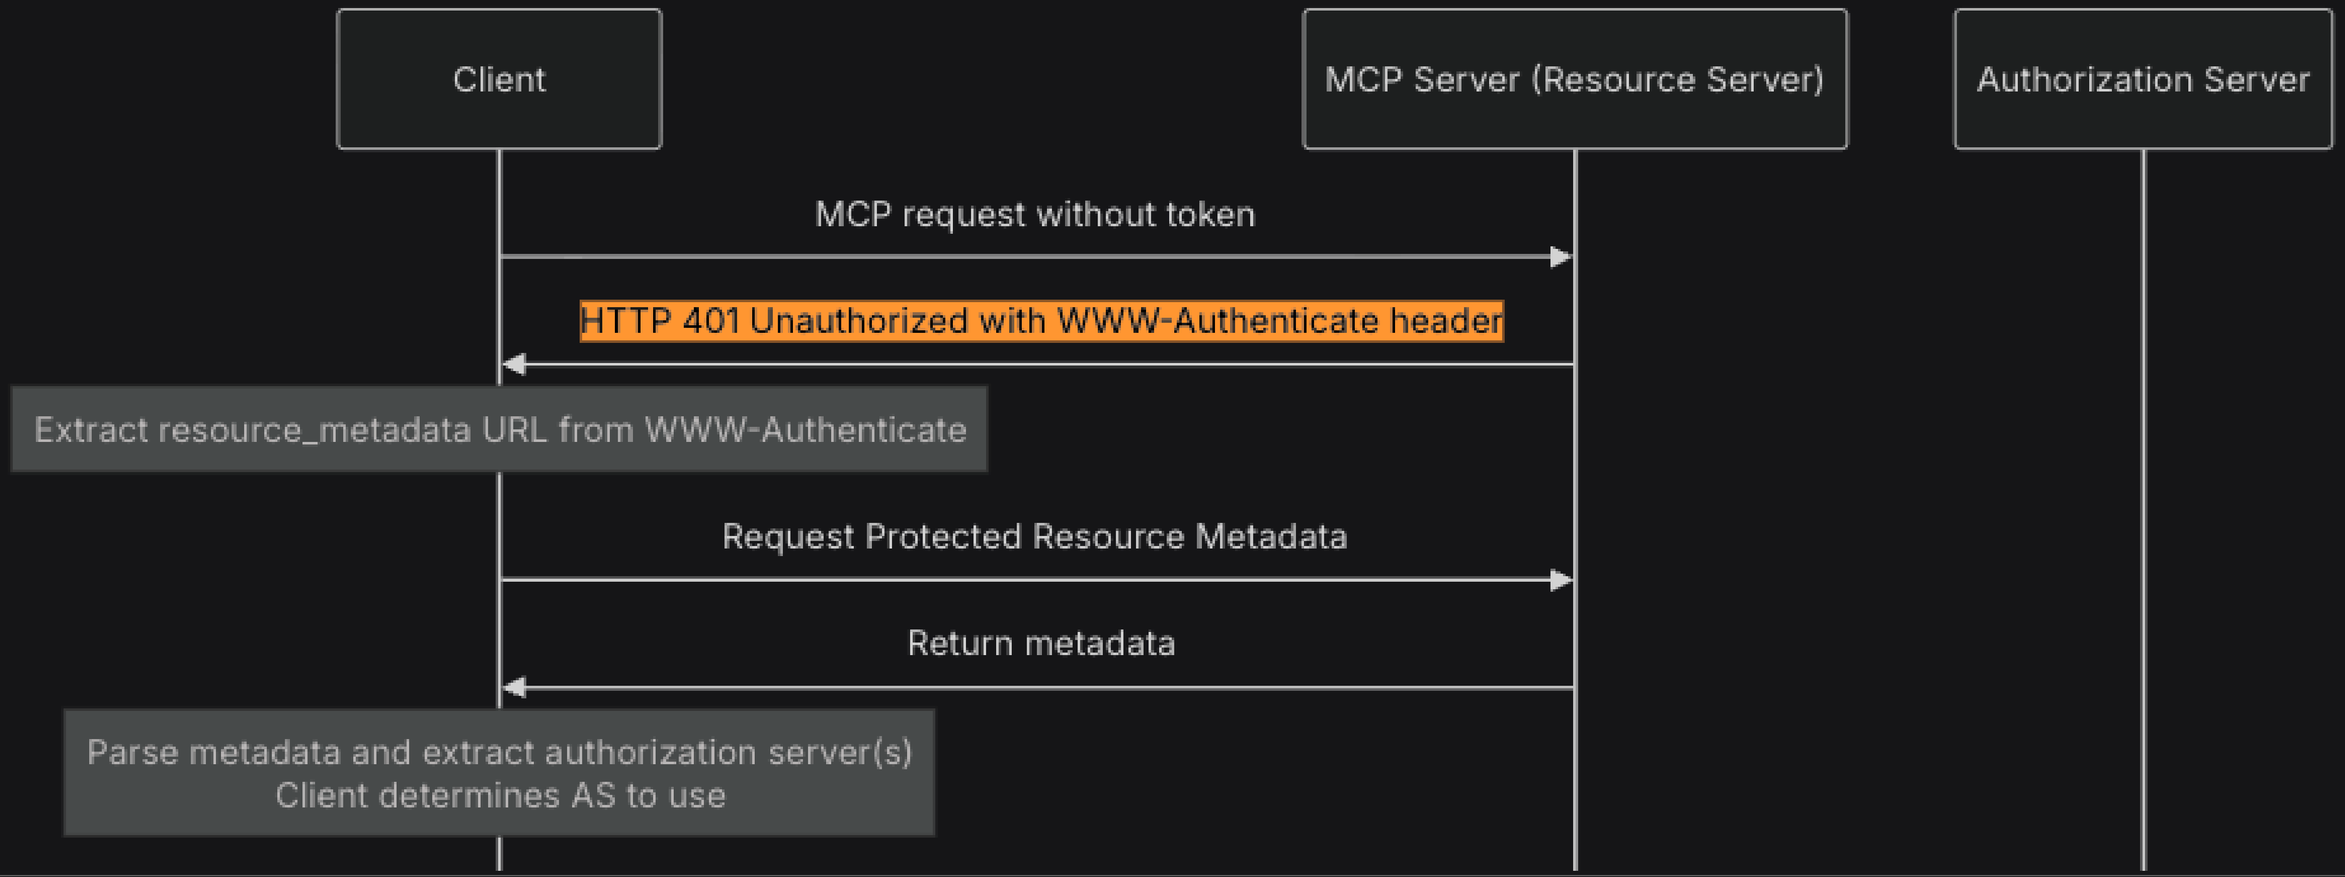

10.4.3 402 Payment Required

This code is reserved for future use.

x402

Client
Server
Facilitator
Blockchain
GET /api
402 Payment Required
PAYMENT-REQUIRED
Create signature
GET /api
PAYMENT-SIGNATURE
/verify
Verification
Do the work here?
/settle
Submit tx w/ signature
to USDC contract
Tx confirmed
Settled
or do the work here here!
200 OK
PAYMENT-RESPONSE

Problem: x402 requires HTTP 402
MCP+OAuth requires HTTP 401 🤦‍♀️

Solution: duplicate x402 API hosts 🤦‍♀️🤦‍♀️

	Service	Category	Endpoints
1	Alchemy x402.alchemy.com	Infra	9
2	Tavily x402.tavily.com	Search	1
3	QuickNode x402.quicknode.com	Data	132
4	Browserbase x402.browserbase.com	Search	1

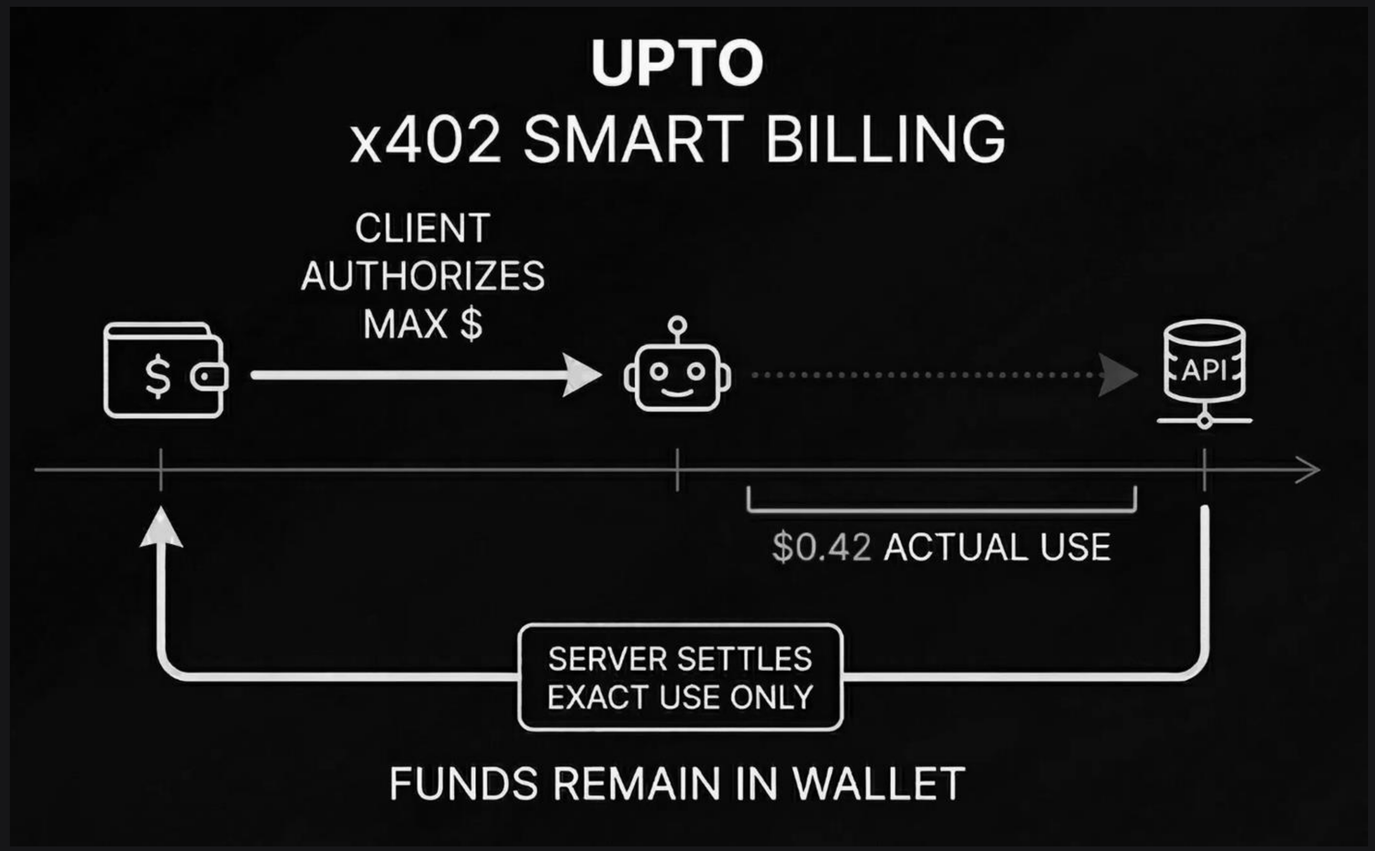

https://agentic.market

Handling pay-per-use pricing in x402

- May 2025: x402 launched with “exact” payment scheme
- Dec 2025: x402 v2 released, promising “upto” scheme
- Apr 2026: “upto” finally released
- May 2026: “batch-settlement” release

Charging for variable usage with “upto” scheme

Doesn’t prevent double-spending!

Charging for variable usage with “exact” scheme + refund

1. Charge the maximum amount upfront
2. Do the work
3. Refund the remainder

Cons:

- Two blockchain transactions (and fees)
- Client needs to trust the server

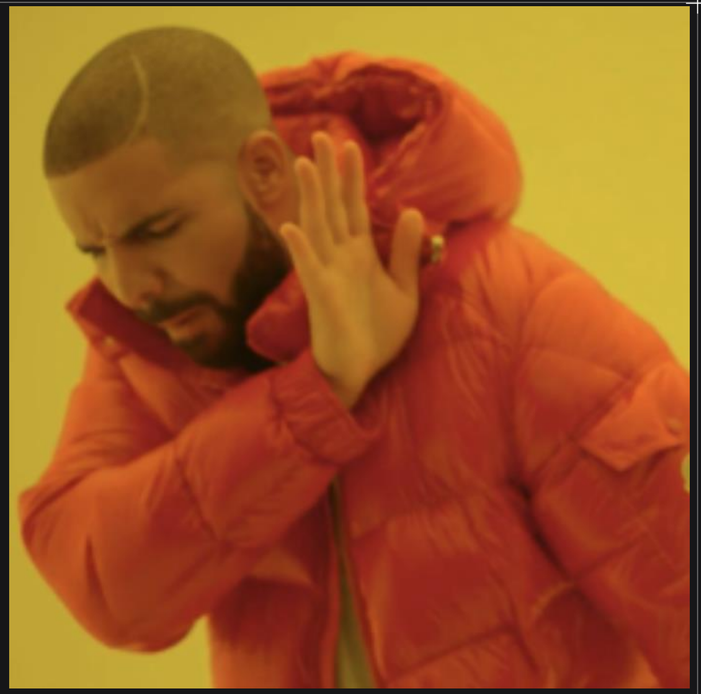

Charging for variable usage with “batch-settlement” scheme (May 26)

1. Deposit: the client opens a channel by depositing ERC-20 funds into escrow.
2. Voucher: each paid request includes a signed cumulative voucher for the channel’s total claimable amount.
3. Verify: the server verifies the voucher and serves the response without waiting for an onchain transfer.
4. Claim: the server’s channel manager periodically claims the latest vouchers from many channels in one transaction.
5. Settle: claimed funds are swept to the receiver in a separate settle transaction.
6. Refund: idle channels can be cooperatively refunded after outstanding vouchers are claimed.

Agent General Interface

agi.apify.com

Apify Agent General Interface (A
agi.apify.com
apify
Apify Agent General Interface (AGI)
> The front door to Apify for AI agents.
[Apify](https://apify.com/llms.txt) is the largest and most trusted marketplace of tools for AI. Thousands of **Actors** let users and agents scrape, crawl, and extract structured data from social media, e-commerce sites, search engines, maps, travel sites, or any other website, turning it into real-time web data for competitor research, lead generation, and monitoring.

Adoption is still negligible

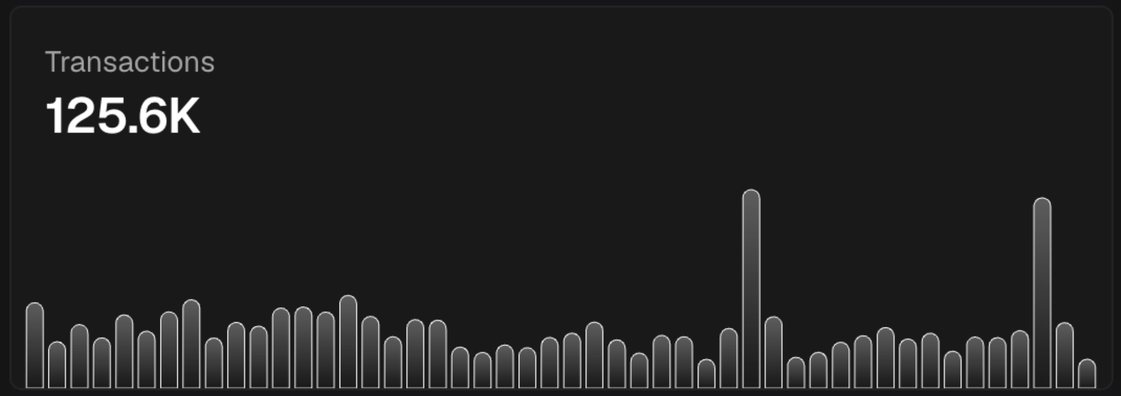

x402 $1M / MPP $1K (last 30 days)

Low supply of services?
No...

Low demand by agents to buy services

Let’s analyse agentic payments funnel:

Need → setup → discover → buy

Need → setup → discover → buy

Problem:

The competition isn’t Visa. It’s an API key.

Enablers:

- Better models
- Always-on agents
- End of token subsidies

Need → setup → discover → buy

Problem:

Most people don’t know how to use crypto wallets.

Enablers:

- Better UX
- Wallet integration in agentic platforms

Need → setup → discover → buy

Problem:

Where to find trustworthy services?

Enablers:

- Trusted directories and marketplaces

Need → setup → discover → buy

Problem:

Fixed price per API call is not enough for most services.

Enablers:

- x402 batch settlement
- MPP sessions

Final remarks

Agentic payments funnel is being enabled right now, opening path to agentic economy.

Good time to figure how you can sell services to agents with the right pricing model, to avoid surprises.
